INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/US03/06717

I.	Basis	of the	report
----	--------------	--------	--------

1. With regard to the **elements** of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)):

	Description, Pages								
	1-13	3	as originally filed						
	Cla	ims, Numbers							
	1-17	•	as originally filed						
	•		• •						
2.	With lang	n regard to the langu o guage in which the int	age, all the elements marked above were available or furnished to this Authority in the ernational application was filed, unless otherwise indicated under this item.						
	The	hese elements were available or furnished to this Authority in the following language: , which is:							
		the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)).							
		the language of publ	ication of the international application (under Rule 48.3(b)).						
		the language of a tra Rule 55.2 and/or 55.3	inslation furnished for the purposes of international preliminary examination (under 3).						
3.	 With regard to any nucleotide and/or amino acid sequence disclosed in the international application international preliminary examination was carried out on the basis of the sequence listing: 								
		contained in the inte	rnational application in written form.						
		filed together with the	iled together with the international application in computer readable form.						
		furnished subsequer	ntly to this Authority in written form.						
		furnished subsequer	ed subsequently to this Authority in computer readable form.						
		The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.							
		The statement that the listing has been furnitude.	ne information recorded in computer readable form is identical to the written sequence ished.						
4.	esulted in the cancellation of:								
		the description,	pages:						
		the claims,	Nos.:						
		the drawings,	sheets:						
5.		This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)).							
		(Any replacement sh report.)	neet containing such amendments must be referred to under item 1 and annexed to this						
6	Additional observations if necessary

Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: US-B1-6 190 237 (KRISHNAN MAHADEVAIYER ET AL) 20 February 2001

D2: WO 01 52618 A (BOHM GEORG ;COLE WILLIAM (US); NAIK SANJEEV (US); BRIDGESTONE CORP) 26 July 2001

D3: US 2001/013506 A1 (MACDONALD MICHAEL J ET AL) 16 August 2001, cited in the application

D4: EP-A-1 150 341 (HITACHI CHEMICAL CO LTD ;HITACHI LTD (JP)) 31 October 2001, cited in the application

Remark: The feature of claims 5, 8 and 14-17 are not referred to in the description. These claims are therefore not supported by the description as required by Article 6 PCT.

1. Novelty

D1, which is considered to represent the most relevant state of the art, discloses polishing compositions comprising abrasive particles and an organic diluent, having a pH of 1 to 6 (see column 4, line 1). Silica constitutes one possibility for the abrasive particles and methanol can be used as organic diluent (see column 3, lines 39-50).

Choosing one single alternative from two lists of possibilities for the two components of the polishing composition in D1 does not anticipate the claimed subject-matter. Furthermore, there is no indication in D1 that draws the attention of the skilled person to this combination.

The subject-matter of claims 1-17 is therefore novel over the available state of the art (Article 33(2) PCT).

2. Inventive step

The problem to be solved by the present invention may therefore be regarded as to provide a silica abrasive-based polishing composition with colloidal stability under acidic

INTERNATIONAL PRELIMINARY International application No. PCT/US03/06717 EXAMINATION REPORT - SEPARATE SHEET

conditions.

There is no hint in D1 taken alone or in combination with the other cited documents to use methanol as an organic diluent under acidic conditions to improve the colloidal stability of the abrasive-based polishing composition.

Moreover, the Applicant has proved by means of comparative tests that the fact of adding methanol as an organic diluent allows to obtain silica abrasive-based polishing compositions with colloidal stability under acidic conditions which are better than polishing compositions containing no additive or containing ethanol, trimethylammonium hydroxide, ammonia or aluminium nitrate, as evidenced by the volume of sedimentation.

The subject-matter of claims 1-17 is therefore considered inventive (Article 33(3) PCT).

3. Industrial applicability

The subject-matter of present claims 1-17 appears to comply with the requirements of industrial applicability as stipulated in Article 33(4) PCT.
